## THE LEGO® MOVIE 2 MASTER ROCKET BUILDING GUIDE

*Helpful hints to guide you towards an awesome launch event\**

**NO1. TEAMWORK:** Make sure each member of the team fully understands their task and can have a role to play in presenting the rocket at the launch event. Assigning each pupil a role will give a good sense of responsibility and inclusion in the whole process.

**NO. 2 LOOKING GOOD:** How will you present the design at the event? Will some good lighting help it look better? Maybe some extra props will help to create the illusion of a real launch.

**NO.3. FINS:** The fins are a crucial element in your overall design. To help the rocket 'launch' they give your rocket stability & must be light yet robust - so which material(s) will you use?

(if cutting with scissors or any other sharp object is involved make absolutely sure that a teacher is supervising you at all times or if at home, that a parent/carer is in charge throughout).

**NO 4. BOLD COLOURS AND STICKERS:** Which colour scheme will you use? At the launch event the brighter the better! Maybe you will want to paint your rocket in the colours of your teacher's favourite football team!

**NO 5. THE NAME GAME:** Your rocket MUST have a name! Think how you might introduce your rocket at the launch event, and maybe you could include a speech on where the name came from and its importance. One member of the team might be tasked with researching the names of illustrious rockets & spaceships of the past.

**NO. 6. LAUNCH SAFETY:** If this were a real launch, what safety precautions would have to be put in place? How would you brief the audience on their role in keeping everything safe? Every participant has a role to play at the launch and safety is crucial to this mission being successful.

**NO 7. THE LAUNCH:** Remember you received a free *The LEGO® Movie 2* Launch Pad incorporated into your LEGO® brick box.

**ENJOY YOURSELF!** The launch is the culmination of your team's hard work and amazing effort so make the most of it. Maybe music could play a part when introducing the rocket, and you could have a group countdown to the launch with audience participation. Perhaps all audience members could be asked to come dressed in a 'space' theme to really liven things up, and the master rocket building team itself could all come dressed as their favourite LEGO® character (from all movies)

**ASK YOUR TEACHER IF YOU  
CAN INVITE PARENTS/CARERS,  
RECORD THE LAUNCH...**

\*Launch event is theatrical and we in no way endorse any actual rocket being launched.
